2. About OpenXcell

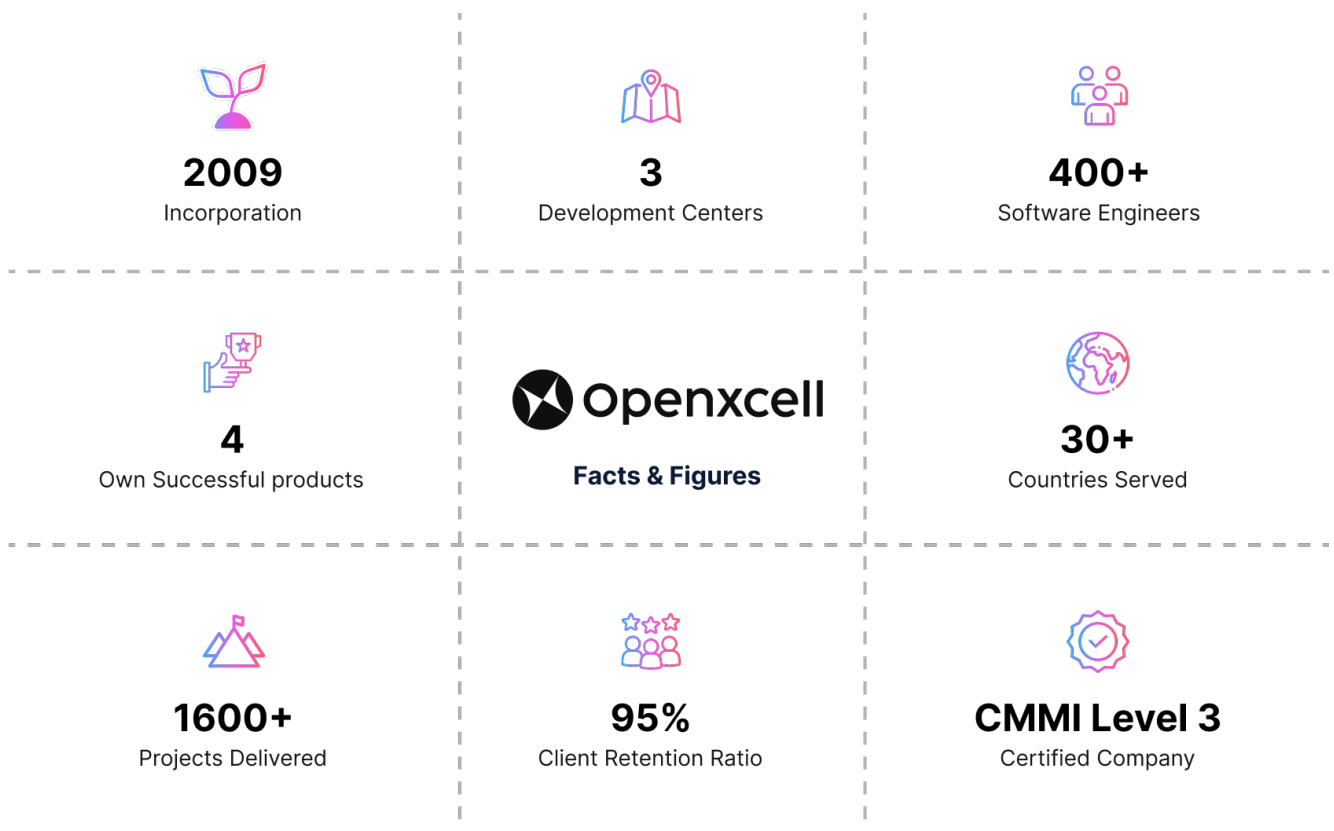

2.1 Overview

OpenXcell is a CMMI Level 3 Certified AI & Software Development Company established in 2009. With a team of 400+ engineers, including Software Engineers, AI Consultants, Data Scientists, Technology Consultants, Creative Designers, QA Testers, Project Managers, and Delivery Heads, we specialize in building AI-driven solutions that help businesses become future-ready. Our expertise includes AI & ML Integrated Platforms, Intelligent Chatbots, Predictive Analytics, Natural Language Processing (NLP) Solutions, Intelligent Automation, IoT, Blockchain, and Real-Time Applications.

Our comprehensive AI services empower businesses to transform operations, enhance decision-making, and achieve scalable growth. We cater to diverse industries, delivering innovative AI solutions that drive digital transformation and unlock new opportunities globally.

With a proven track record, we've successfully developed and maintained high-performance software products, mobile applications, e-commerce platforms, marketplaces, and next-gen AI-powered systems. Our experience spans AI implementation in Enterprise Applications, Data Analytics, Business Intelligence, and Digital Transformation, ensuring operational excellence across sectors.

At OpenXcell, we combine our AI and software development expertise with hands-on product innovation. Our successful SaaS products like **Orderhive (now Cin7)**, **Speed**, **JobTatkal** reflect our deep understanding of scaling products and technologies, giving our clients a strategic advantage as they navigate their path to success.

2.2 Our Clientele

Our Clientele

Our enterprise and start-up clientele

At OpenXcell, we have a proven track record of helping clients transform their businesses using innovative technologies and decades of experience as a custom software development company.

2.3 Our Work

Based on the understanding of the business requirements, OpenXcell has specifically identified below portfolio which demonstrate our experience and substantiate the key success criteria of the proposed requirement.

3. Scope of Work

3.1 Project Overview

REVALO24 is a fully EU-compliant, multi-tenant real estate platform designed for the European market. This document defines the comprehensive scope of work, including all functional modules, user roles, technical architecture, third-party integrations, compliance requirements, and deliverables agreed upon for the development engagement.

3.1.1 Project Objectives

- Build a scalable, multi-tenant real estate listing platform serving the European market
- Ensure full EU regulatory compliance (GDPR, OSS tax, German trade law)
- Provide AI-powered tools for translation and property listing optimization
- Enable automated property imports via OpenImmo standard from major CRM systems
- Support multi-language operations across 9 European languages
- Implement secure payment processing with EU tax automation

3.2 System Users & Access Levels

The REVALO24 platform defines a hierarchical role-based access control (RBAC) system with distinct permissions and capabilities for each user type. The following roles are established within the system:

Role	Type	Description	Access Level
Super Admin	System (Locked)	Platform owner with unrestricted access to all system functions, settings, and data. Cannot be modified or deleted.	Full platform control
Administrator	Platform Management (Editable)	Platform operators managing day-to-day operations including user verification, content management, subscription oversight, and agent compliance monitoring.	Admin Panel — All modules except system-critical settings
Agent	End User (Locked)	Licensed real estate professionals who create and manage property listings, purchase subscriptions and featured placements, and use AI tools.	Agent Panel + Public Frontend
Private User	End User (Editable)	Registered consumers (B2C) with full access to their private dashboard, including manual property listing, saved searches, favorite management, and direct inquiry capabilities.	Public Frontend + Private Dashboard — Authenticated features with listing management

Role	Type	Description	Access Level
Public Visitor	Anonymous	Unauthenticated website visitors browsing properties and viewing public content.	Public Frontend — Read-only public content

3.2.1 Role Permission Matrix

The following matrix summarizes key permissions across all defined roles:

Function	Super Admin	Administrator	Agent	Private User	Public
User Management	Full CRUD	View/Verify	Own profile only	Own profile only	N/A
Property Management	Full CRUD	View/Moderate	Full CRUD own	Limited CRUD own (max 3 listings)	View only
Subscription Management	Full control	View/Override	Purchase/Manage own	N/A	N/A
CMS / Legal Pages	Full CRUD	Full CRUD	View only	View only	View only
AI Translation Manager	Full access	Full access	N/A	N/A	N/A
AI Expose Optimizer	View usage	View usage	Usage-based	N/A	N/A
Analytics & Reports	Full access	Full access	Own listings only	N/A	N/A
OpenImmo Import	Full control	Monitor/Retry	Own imports only	N/A	N/A
Payment & Invoicing	Full access	View/Export	Own invoices only	N/A	N/A
System Settings	Full control	Limited	N/A	N/A	N/A

Note: Agents with Developer designation can create New Construction Project listings — a master listing linked to multiple sub-unit property listings.

3.2.2 Authentication & Security

- Token-based authentication using Laravel Sanctum for API security
- Double Opt-In (DOI) EU security standard for ALL registrations (both private/B2C and commercial/B2B users) via activation link or OTP code
- Multi-Factor Authentication (MFA) via authenticator app or SMS OTP supported for all registered users.
- Social Login supported via Google OAuth 2.0 and Apple Sign-In for both Private Users and Agents.
- Two verification methods supported: Email activation link and numeric OTP (6-digit code)
- Unverified accounts are technically blocked from login, panel access, and listing publication until DOI verification is completed
- All sensitive database fields encrypted at rest using Laravel Eloquent encryption

3.3 Technology Stack

The following technology stack has been specified for the REVALO24 platform development. All components are selected to ensure long-term maintainability, security, and scalability.

Layer	Technology	Purpose
Admin Panel	Laravel + Filament v3	Back-office application for platform management
Agent Panel	React SPA + Tailwind CSS	Agent-facing property management interface
Public Frontend	React SPA + Tailwind CSS	Consumer-facing property search and discovery website
Backend API	Laravel REST API	Core business logic and data services
Authentication	Laravel Sanctum	Token-based API authentication
Database	MySQL 8.x	Primary data persistence with encrypted fields
Payments	Stripe + Stripe Tax (EU OSS) + DATEV Metadata	Subscription billing, tax compliance, accounting
AI Engine	Gemini 1.5 Flash or similar model	Translation and property description optimization
Maps	Google Maps API	Map search, geocoding, radius search visualization
Tax Validation	EU VIES API	Real-time EU VAT ID validation
Property Import	OpenImmo FTP + XML Parser	CRM integration for property data import
Code Quality	PHPStan Level 8, Laravel Pint, SonarCloud	Static analysis and code quality enforcement
Testing	Pest/PHPUnit	Manual testing with coverage requirements
CI/CD	GitHub Actions	Manual testing, quality gates, deployment
Project Tracking	Jira + Confluence	Task management and documentation

3.3.1 Code Quality Standards

- PHPStan Level 8: Strict type safety across all business, model, and application layers
- Laravel Pint: Code style enforcement per Laravel coding standards
- SonarCloud: DRY principle checks, cognitive complexity limits, security vulnerability scanning
- Maximum 3% duplicated code and zero open security vulnerabilities
- PHPDoc documentation required for all classes, service layers, interfaces, and complex controller actions

3.3.2 Development Workflow

- Trunk-Based Development on protected main branch
- Branch naming: feat/PROJ-{JIRA-ID}_{description} or fix/PROJ-{JIRA-ID}_{description}
- All commits must include JIRA ID in commit messages
- No direct commits to main — all changes via Pull Request
- Pull Requests must pass all CI/CD Quality Gates before merge

3.3 Scope Summary & Additional Information

The scope encompasses the complete design, development, testing, and deployment of the REVALO24 platform, organized across the following major functional areas:

Functional Area	Description
Admin Panel (Filament)	Super admin and administrator back-office for platform management, user administration, content management, subscription oversight, and analytics
Agent Panel (React SPA)	Front-office application for real estate agents to manage listings, subscriptions, profile, and access AI tools
Public Frontend (React SPA)	Consumer-facing website for property search, discovery, contact, and agent registration
Laravel REST API	Backend API serving all frontend applications with authentication, business logic, and data persistence
OpenImmo Import Module	FTP-based property import system supporting major German real estate CRMs (onOffice, FlowFact, Propstack)
AI Features	Gemini-powered translation manager and property expose optimizer
Payment & Subscription	Stripe-integrated billing with EU tax compliance and featured listing purchases
Compliance & Security	GDPR-ready registration, double opt-in, audit trails, data encryption, and legal page management

3.4 Feature List

This section provides a comprehensive breakdown of all functional scope organized by user role. Each subsection details the complete set of features, capabilities, and restrictions applicable to that role.

3.4.1 Super Admin Scope

The Super Admin role represents the platform owner with unrestricted access. This role is system-locked and cannot be modified or deleted by any other user.

User & Account Management

- Full CRUD operations for all user accounts across all roles
- View and manage verified vs. unverified accounts
- Manual account verification capability
- Agent imprint data verification and compliance flagging

Property Management

- Full CRUD for all properties across all agents
- Property status workflow management: Active, Sold, Rented, Draft
- Bulk actions across all agents' listings (activate, deactivate, delete, change status)
- Property type taxonomy management (CRUD with status control)
- Amenities management (CRUD with pre-loaded defaults: Balcony, Garden, Parking, Elevator, AC, Pool)

Subscription & Billing Management

- Full subscription package management: name, frequency (monthly/yearly), price, notes — fully editable in Filament Admin Panel allowing immediate shifts (e.g., from €41 to €399 or "unlimited" variables without code changes)
- Each subscription package includes: listing quota, AI Expose Optimizer usage credits, and featured placement eligibility — all configurable per plan (Max 3 plans considered)
- Featured listing plan builder: define placement tiers ("Featured" and "Top") with pricing
- Premium booster configuration independent of subscription packages
- View all agent subscriptions, histories, and invoices
- Subscription analytics dashboard: charts by time period, active subscription counts
- Premium placement analytics: active boosted listings, revenue from premium placements

CMS & Content Management

- Full CMS control for all legal pages: Imprint, Terms & Conditions, Privacy Policy, About Us, Cookie Policy
- Rich text editor for each page/language combination (all 9 languages)
- Automatic footer page rendering based on user locale
- SEO tags management per property: title, keywords, description, preview image
- Multi-language platform string management via AI Translation Manager

AI Translation Manager

- Admin Panel interface for managing all platform strings
- One-click auto-translation of any string into all 9 supported languages via Gemini 1.5 Flash
- Batch translation of all untranslated strings in single operation
- JSON export for external use; Excel export/import for offline editing
- Translation status indicators (auto-translated vs. manually reviewed)
- Manual override capability for admin corrections

OpenImmo Import Administration

- FTP credential management UI for all agents
- Import history dashboard with per-agent import logs
- Monitor import status, retry failed imports, view error details
- Security oversight of FTP infrastructure (chroot jail, SFTP access)

Analytics & Reporting

- Admin Dashboard: Total Properties, Sold count, Active count, Total Agents
- Aggregated statistics view across all listings and agents
- Daily views and clicks tracking with 7-day and 30-day bar charts
- CSV export capability for external analysis
- Audit trail / activity logs viewable for compliance monitoring

System Administration

- Country management (name, ISO code) with 13 pre-loaded EU countries
- Role and permission configuration (Admin role editable)

- Location data management (county, city, postal code, street, geo-coordinates)
- Contact person management (agent/provider details assignable to properties)
- Payment and invoice archive access

3.4.2 Administrator Scope

The Administrator role is designed for day-to-day platform operations. This role is editable and can be customized by the Super Admin as needed.

User Management

- View and verify agent accounts and imprint data
- Flag non-compliant agents based on missing 34c GewO information
- View verified vs. unverified account status
- [Manual verification of commercial agent accounts via Admin Panel "Verify Agent" master toggle — agents blocked from public listing exposure until regulatory profile fields are completed and manually approved](#)

Content Management

- Full CRUD for all CMS legal pages in all 9 languages
- Rich text editing for each page/language combination
- Property content moderation across all agents
- SEO tag management per property

Subscription & Financial Oversight

- View all active subscriptions and billing histories
- Access subscription analytics dashboard
- View premium placement analytics and revenue data
- Export payment and invoice data

Operational Monitoring

- Monitor OpenImmo import activities and logs
- View platform-wide statistics and analytics
- Access audit trails and activity logs
- Manage featured listing plans and subscription packages

3.4.3 Agent Scope

The Agent role is the primary revenue-generating user type. Agents subscribe to the platform to list and promote their properties. All agent features are accessible through the React-based Agent Panel.

Authentication & Onboarding

- Registration with role assignment as Agent via API
- Double Opt-In (DOI) verification before account activation
- Profile completion with mandatory German legal fields:
 - Managing Director's name

- Regulatory Authority reference (e.g., 34c GewO)
- Commercial Register number
- Account restricted from creating listings until all mandatory profile fields are completed
- **Verification Gate for Commercial Agents (B2B):** While private listings can go live immediately following successful email verification, commercial agents are blocked from exposing listings publicly until their mandatory regulatory profile fields (34c GewO for Germany or corresponding national tax/broker licenses for international regions) are completed and manually approved via the Admin Panel "Verify Agent" master toggle
- **Clear UI indicator showing profile completion status, missing fields, and admin verification state (pending/approved/rejected)**
- Token-based login with Laravel Sanctum

Property Management

- Full property CRUD: Create, read, update, and delete own listings
- Property details: Title, description, listing type (sale/rent), price, currency
- Extended property details: Living area, land area, rooms, bedrooms, bathrooms, floor, year built, energy rating
- Location assignment: County, city, postal code, street, latitude/longitude
- Property type and amenities selection
- Property status management: Active, Sold, Rented, Draft
- Bulk actions: Activate, deactivate/pause, delete (with confirmation), change status via checkboxes
- **New Construction Project support: Agents can create a master development project listing and associate individual unit listings (sub-units) to it. Sub-units inherit project-level details (location, developer name, project description) with unit-level overrides for price, floor, and area.**
- **For listings imported via CRM/OpenImmo, manual edits are overridden by the next scheduled CRM sync. A UI warning is displayed on such listings.**

Media Management

- Multiple image upload with preview capability
- Image deletion and reordering
- Video upload and YouTube URL embedding
- Floor plan upload and display

Subscription & Billing

- View available subscription packages and featured listing plans
- Purchase subscriptions via Stripe integration (Buy Now / Upgrade)
- Prorated billing on subscription changes
- View current subscription details, history, and end dates
- Download PDF invoices
- **Subscription plans are bundled packages that include both a listing quota allowance and AI feature access (AI Expose Optimizer usage). The number of listings and AI credits available is defined per subscription tier in the Admin Panel.**
- Access Stripe Customer Portal for:

- Downloading PDF invoices
- Viewing billing history
- Updating payment methods
- Managing/canceling subscriptions
- upgrade, downgrade (with prorated billing adjustment)

Premium / Featured Listings

- Purchase "Featured" placement for priority visual highlighting (colored frame and badge)
- Purchase "Top" placement for pinned search result positioning
- View available placement tiers and pricing defined by admin
- Direct Stripe purchase integration for premium placements

AI Expose Optimizer

- Upload raw property description in any language
- One-click generation of professional, conversion-optimized listing text
- Output generated in all 9 supported languages via Gemini 1.5 Flash
- Structured output: headline, key features, full description, call-to-action
- Apply generated content directly to listing or copy for manual editing
- Usage tracked per agent and tied to subscription plan allowances
- Agents provide property content in one source language of their choice. Gemini automatically generates translations into all remaining 8 supported languages. Translations can be reviewed and manually overridden by the agent.

Smart Property Import & Multiparsing Router

- Receive individual FTP/SFTP credentials for property data import
- Unified "Upload Property via CRM" button for all users — single, standardized interface regardless of CRM source
- Upload ZIP archives containing XML and media files via FTP/SFTP
- Support for FULL, DELTA, and DELETE import operations
- Email notifications on import completion or failure
- View personal import history and logs
- Smart Backend Multiparsing — automatic schema detection and processing
 - DACH Region: German OpenImmo XML structures (v1.2.5 and v1.2.7) from onOffice, FlowFact, Propstack
 - Southern Europe: Kyero XML and Green-Acres XML structures (Spanish and Portuguese markets)
 - Eastern & Southeastern Europe: Localized XML standards (Czech, Polish) plus REST API/Webhook translation bridge for direct CRM integration
- Manual fallback: Agents can directly upload an OpenImmo-compliant ZIP archive through the Agent Portal UI (browser-based file upload) when automated FTP/CRM sync is unavailable or not configured.

Personal Dashboard

- Property statistics: Total, Sold, Active counts
- Daily views and clicks per listing (7-day and 30-day bar charts)

- CSV export of statistics for external analysis
- Profile management and update
- Contact tracking for private user inquiries

3.4.4 Private User / End User Scope

Private Users (B2C) are registered consumers with full access to their private dashboard, including manual property listing functionality, saved searches, favorite management, and direct inquiry capabilities. This role supports both property seekers and private providers.

Authentication

- Registration with GDPR-compliant flow including mandatory, non-pre-selected checkboxes
- Checkbox 1: Terms & Conditions (AGB) — must be explicitly checked
- Checkbox 2: Privacy Policy (GDPR) — must be explicitly checked
- Registration blocked until both checkboxes are activated
- Consent timestamp and IP address logged per user for compliance records
- Double Opt-In verification required before account activation

Property Interaction

- Save favorite listings to personal dashboard
- Save search queries for quick re-access
- Contact property owner/agent through inquiry forms
- View detailed property information including images, descriptions, amenities, and contact details

Personal Dashboard

- Listing management: manual property listing creation, saved/favorited properties, and saved search queries
- Manual property listing creation limited to a maximum of 3 active listings per Private User account. No access to subscription management, AI tools, or premium placement features.
- Saved searches management
- Profile management

3.4.5 Public Visitor Scope

Public Visitors represent unauthenticated users who can browse the public frontend without registration.

Property Discovery

- Browse property listings with pagination
- Search properties with filters: Country, City, Property Type, Price Range, Living Area, Bedrooms, Listing Type
- Map-based visual search with property markers
- Radius search: input by city or postal code with selectable radius (5km, 10km, 25km, 50km)
- Sort results: Newest first, Price ascending, Price descending
- Hero search with autocomplete by address, city, or ZIP code
- Buy / Rent toggle for quick filtering

- Instant results preview on search input

Property Details

- View property images, descriptions, amenities, room details
- Contact owner/agent form (stores inquiry for specific agent)
- View agent contact information

Static Content

- View Contact Us and About Us pages rendered from CMS
- View all legal pages: Imprint, Terms & Conditions, Privacy Policy, Cookie Policy
- Access agent registration page

3.5 Platform Considerations

The REVALO24 platform is architected as a modern, API-first, multi-tenant system designed for the European real estate market. The following architectural decisions and platform considerations define the foundation of the solution:

3.5.1 Application Architecture

- Admin Panel: Server-rendered application using Laravel + Filament v3 for efficient back-office operations
- Agent Panel & Public Frontend: Single Page Applications (SPA) using React with Tailwind CSS for responsive, modern user experience
- API Layer: Versioned REST API (v1) serving as the single backend for all frontend applications
- Database: MySQL 8.x with encrypted sensitive fields and automated backup pipeline
- Hosting: [AWS EU \(Frankfurt\) region for production and staging, managed via Laravel Forge or AWS Elastic Beanstalk for full GDPR compliance](#)
- File Storage: Isolated FTP/SFTP infrastructure for OpenImmo imports with chroot jail security

3.5.2 Multi-Tenancy & Multi-Language

- Multi-tenant architecture supporting multiple agencies/agents on a single platform instance
- 9 supported languages: German, English, French, Spanish, Portuguese, Dutch, Czech, Polish, Slovak
- All content manageable independently per language including legal pages, property descriptions, and UI strings
- [Additional languages and countries can be activated on-demand via Admin Panel. All 13 EU nations and 9 core languages are pre-loaded; only 9 focus countries visible at public launch with admin control to activate additional regions.](#)
- [Language Selector UI: The active language is permanently displayed as a clickable element in the top navigation bar across all frontend surfaces \(Public Frontend and Agent Panel\). Clicking opens a dropdown menu displaying all 9 supported languages in a grid layout on desktop. On mobile devices, clicking triggers a bottom-sheet overlay with all language options. Language selection takes effect immediately without redirecting the user to a settings page.](#)
- [Frontend Routing: All public-facing pages use language-prefixed URL paths \(e.g., /de/immobilien, /en/properties, /cz/nemovitosti\). The SPA routing layer handles locale-based path prefixes. Users can](#)

switch language via the navigation selector at any time, updating both the URL path and displayed content.

3.5.3 Geographic Scope

- Platform designed for EU-wide operations with 13 pre-loaded EU nations and 9 core languages (German, English, French, Spanish, Portuguese, Dutch, Czech, Polish, Slovak)
- Location data model: Country > County/Region > City > Postal Code > Street > Geo-coordinates
- Map-based search using Google Maps API with radius search capability (5km, 10km, 25km, 50km)
- EU tax handling with country-specific VAT rates and B2B reverse charge support

3.5.4 Quality Assurance & Deployment

- Strict CI/CD pipeline with GitHub Actions triggered on every push
- Mandatory test coverage: 90% statement coverage + 80% decision coverage from Milestone 3 onward
- Static analysis: PHPStan Level 8, Laravel Pint code style enforcement, SonarCloud integration
- Protected main branch with trunk-based development and pull request reviews
- Staging environment for UAT before production deployment
- Performance Standards: Google Lighthouse Speed Score of 85+ on Mobile and 90+ on Desktop enforced throughout development
- Media Optimization: Server-side processing queue that downsizes heavy assets and transforms emailed or FTP-synchronized images into web-optimized WebP formats

4. Third-Party Integrations & APIs

The REVALO24 platform integrates with multiple third-party services to deliver its full functionality. The following integrations are within the scope of this project:

4.1 Stripe Payment Platform

- Full Stripe integration for subscription billing and one-time purchases
- Stripe Tax (EU OSS) for automatic tax calculation on B2C transactions
- Stripe Customer Portal integration for self-service billing management
- Webhook handling: invoice.paid, grace period, inactive events
- Automated PDF invoice generation per transaction
- Automated invoice email dispatch after successful payment
- 100% EUR Fiscal Base: All billing, internal databases, and Stripe checkouts execute exclusively in EUR to eliminate multi-currency accounting overhead. Frontend displays localized currency estimates (CZK/PLN) based on daily exchange rates; actual gateway transactions process the precise EUR equivalent
- Prorated billing on subscription upgrades/downgrades
- Stripe Coupon Engine Integration: Backend coupon system supporting promo codes (e.g., founding members / target associations) that automatically discount recurring invoices to €0, with seamless transition to regular paid tiers once the promotional lifecycle expires
- The hosted Stripe Customer Portal (pre-built by Stripe) will be used for all agent subscription self-service actions. No custom subscription management UI will be built within the Agent Panel beyond redirecting to the Stripe portal.

4.2 EU VIES API

- Real-time VAT ID / DIČ validation for EU B2B transactions
- Complete JSON/XML response payload archived in database for audit compliance
- Official corporate name, registered address, and EU timestamp token storage
- Automatic reverse-charge application (0% VAT) for valid VAT IDs
- Background re-validation 24 hours before recurring subscription renewals
- Automatic fallback to B2C VAT rate if VAT ID becomes invalid

4.3 Google Maps API

- Map-based property search visualization
- Property marker display using geo-coordinates
- Geocoding for address-to-coordinate conversion
- Radius search visualization
- Autocomplete for address, city, and ZIP code inputs

4.4 Gemini 1.5 Flash (AI)

- Platform string translation across all 9 languages
- Property description optimization and generation
- Asynchronous queue processing with retry logic (minimum 3 attempts)
- Exponential backoff for rate limit handling (429 responses)

4.5 DATEV Integration

- Automatic metadata attachment to every Stripe transaction
- Metadata includes: Internal User-ID, Company Name, Tax-Type
- Metadata visible in Stripe dashboard and exportable with transaction reports
- Enables direct DATEV import for automated accounting

4.6 Smart Backend Multiparsing Router

- [Unified "Upload Property via CRM" button on React Agent Panel](#) — single, standardized interface for all users regardless of CRM source
- Automatic schema detection of incoming data packages (bulk ZIP archives over FTP/SFTP)
- [Native parsing support by region:](#)
 - [DACH Region: German OpenImmo XML \(v1.2.5, v1.2.7\) from onOffice, FlowFact, Propstack](#)
 - [Southern Europe: Kyero XML and Green-Acres XML \(Spanish and Portuguese markets\)](#)
 - [Eastern & Southeastern Europe: Localized XML standards \(Czech, Polish\) plus flexible REST API/Webhook translation bridge for direct CRM hookups](#)
- Complete field mapping from OpenImmo schema to REVALO24 data model
- Complete field mapping from OpenImmo schema to REVALO24 data model
- Support for FULL, DELTA, and DELETE operations
- Multilingual field support for all 9 languages
- Automated ZIP extraction, image optimization, and duplicate detection

- CRM data takes precedence in all sync operations. Any manual edits made to a property listing via the Agent Portal will be overwritten by the subsequent automated CRM sync. Agents are shown a persistent UI warning on CRM-linked listings stating that manual edits will be overridden by the next import.
- Following successful CRM/OpenImmo import, property description fields are automatically submitted to Gemini for translation into all remaining supported languages based on the detected source language of the import.

4.7 Client-Provided Services

The following services and credentials are to be provided by the client:

- GitHub repository, Jira, and Confluence accounts/licenses
- SonarCloud account and project token
- Gemini 1.5 Flash API key and associated usage costs
- Google Maps API credentials and usage costs
- Stripe account, keys, and transaction/tax fees
- EU VIES API credentials (public service)
- FTP server hosting infrastructure
- Production server, SSL certificate, domain, and DNS configuration
- Required Business Logic will be provided by the client.
- Third-party APIs (Testing environment, Live credentials - whichever is needed), whether it is free or paid, will be provided by the client only. OpenXcell will not be responsible for the API's outcome (delays, failures, inaccurate responses, or disruptions). The cost for the same will be borne by the client
- Client will have to provide the exact APIs for the integrations. In case, client requires a technical feasibility check for APIs, then it will be part of R&D and will be charged accordingly.

4.8 Social Authentication

- Google OAuth 2.0 and Apple Sign-In integration for user registration and login across all end-user roles.

5. Compliance & Regulatory Requirements

The REVALO24 platform must comply with EU and German regulatory requirements. The following compliance features are within scope:

5.1 GDPR / Data Protection

- Encryption at rest for all sensitive database fields using Laravel Eloquent encryption
- Mandatory, non-pre-selected consent checkboxes during registration
- Consent timestamp and IP address logging per user
- Audit trail / activity logs for compliance monitoring
- User data deletion capabilities
- Database disaster recovery with automated daily encrypted snapshots to client-controlled storage (e.g., AWS S3)

5.2 German Trade Law (34c GewO)

- Mandatory agent profile fields: Managing Director name, Regulatory Authority, Commercial Register number
- Property listing blocked until all mandatory imprint fields are completed
- Clear UI indicators for profile completion status
- Admin capability to view and verify agent imprint data
- [Admin Panel "Verify Agent" master toggle for manual approval of commercial agents before public listing exposure](#)
- Non-compliant agent flagging system with regulatory profile field tracking (34c GewO for Germany, corresponding national licenses for international regions)

5.3 EU Tax Compliance (OSS)

- Germany: 19% VAT applied to net price for domestic transactions
- EU B2B: Reverse-charge mechanism (0% VAT) with validated VAT ID
- EU B2C: Automatic country-specific VAT via Stripe Tax OSS
- Real-time VIES API validation for B2B transactions
- Recurring VAT re-validation before subscription renewals
- Audit-proof archival of all tax validation responses

5.4 Security Standards

- Double Opt-In (DOI) EU security standard for all registrations
- Two supported verification methods: email activation link and 6-digit numeric OTP
- Configurable verification method by admin
- Unverified accounts technically blocked from all system access
- Laravel Sanctum token-based authentication
- 5-second timeout limits on external API calls to prevent worker blocking
- File upload size limits: 100MB max per ZIP, 10MB max per image
- Duplicate image detection via file hash verification
- Chroot jail isolation per agent for FTP access

5.5 CI/CD Quality Gates

- PHPStan Level 8 — strict type safety
- Laravel Pint — Code style enforcement
- Pest/PHPUnit — 90% statement coverage + 80% decision coverage
- SonarCloud — max 3% duplicated code, zero security vulnerabilities
- All gates must pass without errors or warnings for milestone completion

6. Project Deliverables

The deliverables mentioned below are currently considered to be an integral part of the project. However, these will be agreed upon between the client and OpenXcell during the finalization of the project brief to ensure that requirements and priorities of the client are clear and understood:

1. Complete source code pushed to client GitHub repository from day one

2. Fully functional web applications (Admin Panel, Agent Panel, Public Frontend)
3. Agent Panel + OpenImmo FTP Setup
4. Change Request Documentation (in case of any change request)

7. Open Questions & Clarifications

- Should featured/placement listing durations be defined in days, weeks, or months?
- Are there limits on the number of listings per subscription tier?
- Can you please explain more about: Listing Approval - Listings from verified agents go live instantly. Does an automated AI keyword screening run in the background?
- Based on feedback VAT Validation Provider: Integration of the free EU VIES API (<https://viesapi.eu/api>), we have checked the page it is stating page not found. Also, we can see there is pricing associated with it (<https://viesapi.eu/offer/>). Please confirm.

8. Assumptions & Dependencies

This section documents the key assumptions and dependencies that form the basis of this scope of work.

8.1 Client Responsibilities & Dependencies

- 1) Client provides GitHub repository with appropriate access for the development team from day one
- 2) Client provides Jira and Confluence accounts/licenses with full access
- 3) Client provides SonarCloud account and project configuration
- 4) Client provides all third-party API credentials (Gemini, Google Maps, Stripe, VIES)
- 5) Client is responsible for all third-party usage costs and transaction fees
- 6) Client provides production server, SSL certificates, domain, and DNS configuration
- 7) Client provides FTP server hosting infrastructure for OpenImmo imports
- 8) Client provides all legal page content in required languages
- 9) Client provides timely feedback on design mockups (5 business day review window)
- 10) Client provides dedicated personnel for UAT validation on staging

8.2 Technical Assumptions

- 1) Development environment based on Laravel + React stack as specified in the RFP
- 2) MySQL 8.x as the primary database with no additional database systems required
- 3) Platform designed for modern browsers (Chrome, Firefox, Safari, Edge — last 2 versions)
- 4) API rate limits of third-party services (Gemini, Google Maps, VIES) are sufficient for expected usage
- 5) All Stripe transactions execute in EUR only. Frontend displays localized currency estimates (CZK/PLN) based on daily exchange rates for non-EUR target regions (Czech Republic, Poland); actual gateway transactions always process the precise EUR equivalent

8.3 Project Assumptions

- 1) Fixed-price contract based on the scope defined in this document
- 2) 32-week timeline assumes no significant scope changes during development
- 3) Milestone-based payment releases upon CI/CD gate passage, UAT verification, and written approval
- 4) 6-month warranty period from production go-live for in-scope bug fixes
- 5) No offline support for a user is considered; the overall system will function solely in online mode.
- 6) Admin will have the authority to manage all user-related actions without requiring additional approvals.

- 7) All the branding assets, content, and Business Logic will be provided by the client.
- 8) OpenImmo integration assumes standard-compliant OpenImmo XML feeds. Custom CRM-specific modifications, malformed XML structures, unsupported schema extensions, custom media handling requirements, or vendor-specific implementations requiring additional mapping shall be treated as Change Requests.
- 9) AI-powered translations are generated through third-party AI services and are intended to accelerate content localization. Human review and approval of translated content remains the responsibility of the Client. OpenXcell does not guarantee linguistic, legal, regulatory, or commercial accuracy of AI-generated translations.
- 10) Multilingual support includes localization of predefined UI labels and platform-supported translation workflows. Translation of legal documents, custom content, marketing material, manually uploaded documents, third-party content, and regional linguistic adaptation are excluded
- 11) The development process will strictly adhere to industry best practices; however, obtaining and maintaining relevant certifications, licenses, or regulatory approvals will remain the responsibility of the client
- 12) Additional costs (like DB, API Credits), Subscriptions to AI services or tools are not considered in the provided effort estimations. The same needs to be purchased by the client at the time of development. OpenXcell will only provide technical assistance to select the required service or cost.

9. Out of Scope

Below are some of the features currently considered out of scope from the proposed Scope of Work. If required in the future, OpenXcell would analyze them and provide a separate scope of work and estimates:

- 1) Native mobile applications (iOS/Android) — web responsive design only
- 2) Third-party translation costs for manual human review of AI-generated content
- 3) Direct API integrations with property advertising portals (e.g., Immobilienscout24, Immowelt) — note: Smart Multiparsing Router now supports Kyero XML, Green-Acres XML, Czech/Polish XML, and REST API/Webhook bridges for CRM import
- 4) Custom CRM integrations beyond the Smart Multiparsing Router supported schemas (OpenImmo v1.2.5/v1.2.7, Kyero XML, Green-Acres XML, Czech/Polish XML, REST API/Webhook)
- 5) Ongoing hosting infrastructure management post-deployment
- 6) Training sessions beyond delivering user manuals
- 7) Any Gamification aspects are considered out of scope
- 8) Referral flows, partial payment, split payment, and refund functionalities are out of scope for this phase.
- 9) Custom promotional campaign engines beyond standard Stripe Coupon functionality are excluded (like loyalty/reward programs, cashback programs, affiliate marketing systems)
- 10) One-One messaging, Group messaging, Multimedia messaging: GIFs, stickers, emojis, voice notes, and image sharing features are considered out of scope
- 11) Custom Analytics & Business Intelligence: While basic stats are on the Dashboard, detailed custom reporting or business intelligence tools are out of scope.
- 12) The platform will not support dynamic report generation. Reports will be static and predefined.
- 13) We are not considering any Offline Support
- 14) Dark Theme is not considered
- 15) Any forecasting, prediction is not considered

- 16) Any model training is not considered
- 17) Direct property booking, purchase transactions, or rental payment processing through the platform is out of scope. KYC/AML verification is not required and is excluded.
- 18) Anything which is not mentioned in the Scope-Of-Work sections of this document.

10. General Notes

- 1) Website designs and integration will be done by OpenXcell.
- 2) Website will be developed in multiple languages as mentioned in the scope part. Admin Panel will be in the English Language.
- 3) All the business/app logic will be provided by the Client.
- 4) The project task list will be uploaded to the PMS (Project Management System) within 2-3 business days after the project is awarded. The task list will contain a more detailed breakup of functionality and features covered in each milestone.
- 5) In case any specific hardware/software required for development & testing purposes, it needs to be provided by the client.
- 6) Number of screens considered for UI Design & Integration are high-level, which may vary during the design phase based on the theme selection. Hence, the timeline and efforts for the UI design and integration may vary.
- 7) Any kind of animation designs have not been considered in the given timeline.
- 8) Third-party APIs (Testing environment, Live credentials - whichever is needed), whether it is free or paid will be provided by the client only. OpenXcell will not be responsible for the API's outcome and associated costs. In case, the client requires a technical feasibility check for APIs then it will be part of R&D and will be charged additional.
- 9) Cost for any third-party software licensing, APIs or hardware pertaining to implementation of the solution, licensed images, etc. will be borne by the client.
- 10) Client will have to provide all the required content and translation for the project. Sample content & data-entry part is not considered in the scope.
- 11) OpenXcell will not distribute or sell the source code & will maintain confidentiality as per NDA.
- 12) Cost for SEO and SEM are not considered in this proposal.
- 13) The client needs to provide feedback on provided builds or responses to questions within 2 - 3 business days, delay in the feedback will impact project schedule. The project timeline is exclusive of any waiting period for feedback.
- 14) Estimates will change/update if there are changes/additions in features during development.
- 15) Client will receive intermediate builds/staging links for testing at the completion of each defined milestones.
- 16) Client will be responsible to reserve the domain name and application name in advance. For any assistance, client can reach out to OpenXcell Project Managers.
- 17) OpenXcell will not be responsible for hardware failure deployed for running the proposed solution and hence client should take up relevant issues with the provider only for the respective system.
- 18) Milestone signoff is key element in the project. Once that is signoff / approved; work on the next milestone will start. The Invoice for the next milestone will be raised and sent to client as per the terms.
- 19) Client will be able to monitor the progress of the work, interact and discuss deliverables in detail (Via Basecamp) with concerned project managers on regular basis. Credentials for the Project Management System will be provided once the upfront payment is received.

- 20) After warranty completion, in case of knowledge transfer or documentation for/to another vendor will be charged extra (as efforts vary based on 3rd party capability).
- 21) Any Project Training, user manuals/guide or technical documentation, if required will be provided as an add-on service. Efforts for the same will be shared by the technical team.
- 22) This is a fixed cost turnkey proposal as per defined scope. It will be handled via shared developer model.
- 23) This quote includes only thorough manual testing to be done by our technical team.
- 24) Any delay in project schedule due to decision making, data gathering or approvals from client side should be handled at client side. OpenXcell won't be responsible to add more resources for early completion in such scenarios.
- 25) In case project goes on hold due to any reason, and after that if client wants to resume the project, newer/revised hourly rates will be applicable.
- 26) Scope of work in this document will be deemed final against any verbal/non-verbal communication before the proposal stage.
- 27) All terms and commercial agreed in this proposal will override the general SLA / MSA document signed with the client.

11. Project Commercials

11.1 Project Estimations

Based on our current understanding of the overall scope of work we have, we propose the following tentative

Project Estimation Summary	
Total Delivery Time (In Weeks)	32 weeks
Total Project Cost (In EUR)	€44,000 EUR

- Projected delivery time is considered using parallel development of front-end and back-end: **Around 30 - 32 Weeks (Approx. 150 – 160 Business Days)** from project start date. It will be handled via shared developer model.
- Given delivery time only depicts the actual development efforts in weeks and not the time associated with the communication, feedback, updates, etc. Client should consider a minimum buffer period of at least 2 - 3 weeks additional on top of mentioned delivery time.

11.2 Payment Milestones

No.	Milestone & Description	Amount in USD
1	1 st Milestone (To be Paid Upfront)	€5500 EUR
2	2 nd Milestone – On initiation of 2 nd Month	€5500 EUR
3	3 rd Milestone – On initiation of 3 rd Month	€5500 EUR
4	4 th Milestone – On initiation of 4 th Month	€5500 EUR
5	5 th Milestone – On initiation of 5 th Month	€5500 EUR
6	6 th Milestone – On initiation of 6 th Month	€5500 EUR
7	7 th Milestone – On initiation of 7 th Month	€5500 EUR
8	8 th Milestone – On initiation of 8 th Month	€5500 EUR
Total Project Cost (In USD)		€44000 EUR

Note: These are the tentative monthly milestones for the proposed project. The exact project planning sheet along with the deliverables will be provided by the technical team once the project is initiated.

11.3 Support & Change Request Rates

Maintenance Support & CR Rates		
1	Maintenance Support & CR Rates	€18 EUR / Hour

11.4 Commercial Terms

- 1) OpenXcell is registered in India & United States with company details:
- 2) OpenXcell Registration No (CIN) - U72200GJ2009PTC057711 (India)
- 3) PAN NO - AABCO1872A (India)
- 4) OpenXcell Inc. EIN: 27-2275470 (USA)
- 5) The invoices will be raised as per the payment schedule defined in the milestones.
- 6) The payment should be made within 03 working days from the date of receipt of the Invoice.

- 7) All amounts are net amounts, excluding all kinds of tax, and processing/ transfer fees. Such additional charges shall be borne by the client.
- 8) All prices above only cover offsite charges, any onsite requirement will have separate charges (can be discussed and agreed upon request). Onsite travel to client location (to and fro) air tickets, lodging and boarding will be charged. Debit note will be raised for the same to the client.
- 9) Non-payment within the due time will result in the delay of the project till the payment is received.
- 10) Delay during any phase of the project by client will not be considered as delay by OpenXcell and any payment milestone will not be delayed due to it.
- 11) All financial transactions will be done in the agreed currency mentioned in this proposal.
- 12) All payments received under this agreement are non-refundable.
- 13) Depending upon the market scenario, OpenXcell project hourly rate is subject to revise after every 6 months. Client will be informed about the same well in advance by the assigned Point of Contact/Project Manager.
- 14) For the first three years following the completion of the project, the client cannot and should not hire any employees of OpenXcell, either directly/indirectly via any subsidiaries.
- 15) **Force Majeure:** In the unforeseen event if OpenXcell is unable to perform its obligations under the terms of this Agreement because of acts of God, epidemic/pandemic, lock-downs, strikes, equipment or transmission failure or damage, or other causes reasonably beyond its control, OpenXcell shall not be liable for any costs or damages due to delay or non-performance under the terms of this Agreement.
- 16) Cost for any third-party software licensing, APIs or hardware pertaining to implementation of the solution, licensed images, etc. will be borne by the client.

11.5 OpenXcell Bank Details

United States Bank Account [International Wire]		
Step – 1 : Enter Beneficiary Bank Information		
1	SWIFT/BIC code	CLNOUS66BRX
2	Bank Name	Column NA - Brex
3	Bank Address	1 Letterman Drive, Building A, Suite A4-700, San Francisco, CA 94129
Step – 2 : Enter Intermediary Bank information		
1	SWIFT/BIC code	CHASUS33
2	Bank Name	JPMorgan Chase Bank N.A.
3	Bank Address	383 Madison Avenue, New York, NY 10179
Step – 3 : Enter Beneficiary Information		

1	Beneficiary Name	Openxcell Inc
2	Beneficiary Account Number	461228129682532
3	Beneficiary Address	304 S. Jones Blvd PMB 520, Las vegas, NV 89107

Note: For more details kindly review this document – [Click Here](#)

12. Project Execution & Approach

12.1 Roles & Responsibilities

No	Team	Responsibility
1.	Client Team	- Form a Project Core team and assign a single Point of Contact - Single Point of Contact to keep control over the proceedings of the project. - Take part in fortnightly review meeting as laid out in the communication plan - Scope management - Provide timely approvals where ever required - Manage schedule variance - Manage & mitigate Risks and escalate issues as required - Project Review - Submit feedback, changes, bugs into basecamp - Timely clearance of the payment
2.	OpenXcell Team	- Ensure Resource availability & System. - Identify and communicate single Point of Contact as Project manager - Scope Management - Form a Steering Committee to keep control over the proceedings of the project. - Take part in fortnightly review meeting as laid out in the communication plan - Manage and Mitigate Risks - Project Review - Status Reporting - Timely escalations on feedback delays from client - Requirement gathering and analysis - System development - Implementation support - Warranty Support

12.2 Project Communication

Communication between the client & OpenXcell team during project execution will be managed along the below guidelines:

- Any transfer of the documentation from either side will be done in PDFs, Microsoft Word or Microsoft Excel sheets in soft copy formats via electronic media. Document standards will be made available.
- All the documents should be in the English language only.
- Client's team and OpenXcell's team will communicate at regular intervals to assess the overall progress of the project and issues that may be impeding its movement and/or progress.
- Means of communication
 - Basecamp
 - Microsoft Teams

- Zoom/Google Meet
- Email
- 5. Contact information of the Project Managers from either side will be made available upon the start of the project.
- 6. Stakeholders responsible for communication
 - Project Manager, OpenXcell
 - Client

If client faces any problem related to project execution, communication, etc. Client can always connect to project manager for clarification or can follow the [12.9 Escalation Matrix](#).

Invitation to the basecamp will be shared at the commencement of the project.

Website: <https://basecamp.com/>

Android Application: <https://play.google.com/store/apps/details?id=com.basecamp.bc3>

iOS Application: <https://itunes.apple.com/us/app/id1015603248>

12.3 Milestone Approval Process

- The client will receive an intermediate build/staging URLs as per the milestones defined. All the builds are installable IPA/APK files which can be installed in the device / staging server link to test and approve.
- Based on client's approval of the intermediate build. OpenXcell will generate respective invoices for payment deposit.
- By any case client wants to work on the next milestone without completing the previous milestone, and then OpenXcell may have to change milestone payment terms and project schedule.
- OpenXcell will submit milestone Sign-Off document, at the completion of each milestone.

12.4 Testing & Quality Assurance

OpenXcell has evolved our software development and support process, quality and project management practices over the years to align them with the best in the industry.

To ensure commitment to quality - OpenXcell team ensures high quality of all deliverables to the client. Following activities are carried out as part of the Quality Assurance practice:

- Quality standards like GUI standards, coding standards, modular structure, etc. have to be followed.
- Peer review of code at random to ensure OpenXcell standards are strictly adhered.
- Fair mix of manual testing.
- Unit testing, Integration testing.

Additional QA services (i.e. stress/load, smoke, regression testing + QA/test cases document) are optional services and separate quote can be provided after development completion.

12.5 Project Deployment

Deployment to Selected Server (1st Time Free) after development completion is already considered in above costing. Which means once the project is completed and approved by all the parties, OpenXcell will initiate migrating and setting up the project on the client Live Server. One-time server set-up on client server is **Free of Cost**.

Later if client wants to manage and further optimize their server, client can opt for additional DevOps services. This service is useful for individual or entrepreneur who does not have technical or DevOps team with them.

OpenXcell shall not be liable for any indirect, incidental, consequential, or punitive damages (including, but not limited to, cloud billing charges, loss of data, or security breaches) arising from unauthorized access, third-party attacks, or misuse of cloud accounts not directly under the Provider's control.

OpenXcell may recommend best practices related to credential management, access control, and monitoring, but the implementation and maintenance of cloud security configurations shall remain the responsibility of the Client unless otherwise stated in a managed services agreement.

The Client is solely responsible for managing, securing, and monitoring their cloud infrastructure (e.g., AWS, GCP, Azure). This includes securing access keys, managing IAM roles, and ensuring no sensitive information is exposed through code repositories or third-party tools.

In the event of any third-party attack, unauthorized usage, or fraudulent activity resulting in increased billing or data compromise, the Client agrees that the Service Provider shall not be held liable unless such an incident is directly caused by proven gross negligence or intentional misconduct by the Service Provider.

The Client is strongly advised to:

- Enable Multi-Factor Authentication (MFA)
- Regularly rotate access keys
- Use IAM roles with limited permissions
- Monitor cloud billing and set usage alerts
- Keep credentials out of code repositories and public platforms

12.6 Warranty & Support Terms

OpenXcell will offer **6 (six) Months** of free technical support. Usually, the warranty period starts once the project is made live on the client's server. If the project is completely delivered/approved but not uploaded to the client's server; in this case the warranty period will start immediately after 100% work completion and delivery. Warranty period will automatically start after 2 weeks of final release for client's feedback & testing.

During the warranty period, any changes in the 3rd party API's used or integrated in the project will not be covered in warranty (since the changes are from 3rd party and cannot be predicted).

OpenXcell will correct any bugs or problems that may come up during this period in our delivered product. Addition of the new features and changes in the functionality are done at an additional cost.

Post Warranty Support Terms

- Post expiration of support agreement, minor and major bug fixing, additional new feature request/changes will be charged as per the **11.3 Support & Change Request Rates**.

12.7 Change Request Management

A change would be defined as, any feature which is not mentioned in the scope of work. Any addition, deletion, enhancement, optimization and/or change in functionality (Business Logic), User Interface (UI), the database and/or any other such aspect of the system will be treated as a Change Request.

The scope of development once agreed by both the parties will be considered as final. Based on the final agreed scope of development, delivery planning shall be derived and agreed, based on which the invoicing milestones will be derived. Further, any changes/additions to be made in the scope of development, as requested by the client is to be made in writing through a Change Request (CR) form.

The change request may affect the project deliveries and timeline depending on the type of change request. In addition, change requests will be separately considered as deliverables under agreed rates for changes. A separate planning will be submitted for the change request; the same will be mutually agreed on the additional scope, timeline as well as pricing based on the separate hourly rate as defined in the “[11.3 Support & Change Request Rates](#)” section.

In no circumstances the original scope, milestones and project deliverables can be merged with change request and thus the invoices / payments and milestones for both activities are to be treated separately i.e. invoicing for the original scope to be made as per schedule despite receipt of change request.

12.8 Project Closure Terms

- 1) Client can terminate the project at any milestone and once the payment for that milestone is received, OpenXcell will send the code to the client.
- 2) Due to any reason if client stops discussion and don't appear in any communication without any prior notice for continuous 1 month, OpenXcell will terminate the project from the system.
- 3) OpenXcell will submit Project Sign-Off Document, at the completion of the project.
 - a. Signing off on this document signifies that the approving client representative is satisfied with the completed requirement of the project.
 - b. The client acknowledges satisfaction and completion with all elements of the project.

12.9 Escalation Matrix

Escalation Level	Department Team	Contact Details
1 st Level	Technical Team	Assigned Project Manager Assigned Delivery Manager
2 nd Level	Operations	Varshal Patel , VP of Operations Email ID: varshal@openxcell.com
3 rd Level	Account Manager	Mitwa Parekh , Account Manager Email ID: mitwa@openxcell.com Contact No: +91 7567076888
4 th Level	Senior Management	Jayneel Patel , CEO Email ID: jayneel@openxcell.com

13. Intellectual Property Rights (IPR)

OpenXcell will be working on the development of project for the client. All the developed source code and the solution related IPR with respect to the developed project will be handed over to the client.

IPR Ownership of the developed product will be transferred to the client on completion and clearance of all payments. Further, OpenXcell shall also be using its generic components in order to expedite the development. IPR of these generic components will be retained by OpenXcell. Apart from this if there are any third-party services/components used for the development, OpenXcell is not liable to provide IPR ownership for the same.

OpenXcell won't be responsible for filing any IPR/Patent/Compliance related to the project. It will be solely client's responsibilities to file in their respective countries.

OpenXcell will be working on the development of project for the client. All the developed source code and the solution related IPR with respect to the developed project will be handed over to the client.

IPR Ownership of the developed product will be transferred to the client on completion and clearance of all payments. Further, OpenXcell shall also be using its generic components in order to expedite the development. IPR of these generic components will be retained by OpenXcell.
